

Network for socio-ecological resilience to climatic adversities

Knowledge exchange platform on the subject of socio-ecological resilience to climatic adversities in Family Farming systems

Argentina / Colombia / Costa Rica / Dominican Republic / Ecuador / Panama

Regional Platform

The implemented initiative

A platform was set up with the aim of developing a consensus proposal called: "Innovations to increase socio-ecological resilience in the face of climatic adversities in mixed systems of family farming, through

their sustainable intensification" through a regional workshop held on 4, 5 and December 6, 2017 in the Rio Negro town of San Carlos de Bariloche, Argentina.

Regional Platform

The technological solution

A proposal for international technical cooperation was prepared to evaluate the impact of innovations for the sustainable intensification of family farming in a

participatory manner through an interdisciplinary approach, the co-construction of knowledge and the use of participatory methodological tools.
