

# Barley genotypes resistant to Yellow **Rust and Spot Blotch**

URUGUAY / PERU / SYRIA / UNITED STATES

Webstory

### The technological solution

Incorporation of resistance to Yellow Rust (Puccinia striiformis) and Spot Blotch (Cochliobolus sativus) to barley genotypes.

## **Description**

Incorporation of genetic resistance to susceptible barley varieties through marker assitant selection. The recipient lines susceptible to Spot were INIA Ceibo and INIA Aromo, and the resistant donor was the BCD47 line. The recipient line susceptible to Rust was INIA Arrayán, and the resistant donor was Ambev 293

#### Results

- Introduction of resistance genes to INIA Ceibo, and INIA Aromo, and INIA Arrayan.
- A process of construction of pyramids of resistance genes to Spot was started using the already known resistance and some of the new resistance detected in the project.
- A network of collaboration and technical support was consolidated among the participants.

#### **ABOUT FONTAGRO**

FONTAGRO is a unique cooperation mechanism for agricultural innovation in Latin America and the Caribbean (ALC) and Spain, that works through regional platforms. It is composed of 15 countries that have contributed capital exceeding 100 million dollars and the Inter-American Development Bank (IDB), which is its legal representative.
