

Effect of grazing on the circulation of nutrients in the grasslands of the Río de la Plata

ARGENTINA / UNITED STATES / URUGUAY

i Webstory

The technological solution

Development of prospecting systems based on the historical behavior of the Normalized Green Index (NDVI), Primary Net Air Productivity (PPNA) and climatic variables for farms in the region, implementing management strategies that optimize the economic, social and environmental use of information.

Description

Using simulation models, the long-term effects of grazing on nitrogen and carbon circulation throughout the region were determined (CENTURY biogeochemical model).

Results

- A model of the NDVI-PPNA relationship for grasslands developed.
- Weather forecast information and pasture growth with a monthly frequency.
- Training for technicians and producers.
- Satellite and climatic information of the intervention area.

ABOUT FONTAGRO

FONTAGRO is a unique cooperation mechanism for agricultural innovation in Latin America and the Caribbean (LAC) and Spain, that works through regional platforms. It is composed of 15 countries that have contributed capital exceeding 100 million dollars. The Inter-American Development Bank (IDB) is its legal representative, and the Inter-American Institute for Cooperation on Agriculture (IICA) is its sponsor.
