Strategy to strengthen the livelihoods of peasant families and the conservation of natural resources

COSTA RICA / COLOMBIA / NICARAGUA

Webstory

The technological solution

Develop technological options to improve economic, social and environmental indicators on farms with integration of coffee and livestock, as well as to strengthen local capacities for planning systems and their articulation to markets.

Description

The analysis of livelihoods was approached in a comprehensive manner through the classification of farms to describe human, natural, social, physical and economic capital. Through cluster analysis, households were classified into groups where the particular reality of each rural household and its relationship with the environment were defined.

Results

- Typification of farms based on livelihoods.
- Agro-Silvo-Pastoril Systems (SASP) models were designed.
- SASP based on the demands of the chains were established.
- Field schools were established for the training of producers.
- Factors that contribute or restrict the massification of SASP were identifyed.
