

PARTICIPATION AND ROLES IN CONSORTIA SINCE 1998

15 MEMBER COUNTRIES

Argentina has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 20 million. Over its 26 years of membership, it has participated in 81 consortia, representing approximately USD 68.4 million, of which FONTAGRO and other agencies contributed USD 20.4 million. Argentina led 31 of these consortia, managing projects worth a total of USD 27.3 million. These projects span research and technological development in areas such as climate change, food security, greenhouse gas reduction, integrated pest management, AgTech development, and more.

Bolivia has been a member of FONTAGRO since 2000, with an initial contribution of USD 2.5 million. Over 24 years of membership, Bolivia has participated in 36 consortia, representing nearly USD 29.8 million, of which FONTAGRO and other agencies contributed USD 11.9 million. Bolivian institutions have led six consortia amounting to USD 3.8 million. These projects cover research and technological development in areas such as climate change adaptation, potato, corn, and bean cultivation, organic farming, among others.

Chile has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 2.5 million. Over 26 years of membership, it has led 19 consortia representing approximately USD 16.6 million and participated in 59 consortia valued at USD 48.0 million, of which FONTAGRO and other agencies contributed USD 16.0 million. These projects cover research and technological development in areas such as the sustainable use of natural resources, wheat, potato, and fruit cultivation, aquaculture, forage crops, livestock, and more.

Colombia has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 10 million. Over 26 years of membership, Colombian institutions have participated in 91 consortia representing approximately USD 74 million, of which FONTAGRO and other agencies contributed USD 25.5 million. Colombian institutions have led 39 consortia with a total amount of USD 27.4 million. Additionally, international organizations based or operating in the country (Alliance Bioversity & CIAT, CIMMYT, IFPRI, and IICA) have led 12 consortia. These projects encompass research and technological development in areas such as livestock, maize, coffee, potatoes, plantains, other fruits, oil palm, forages, and more.

Costa Rica is a founding member of FONTAGRO since 1998, with an initial contribution of USD 0.68 million. Over 26 years of membership, it has participated in 67 consortia representing approximately USD 57 million, of which FONTAGRO and other donors contributed USD 18.5 million. Costa Rica has led 20 of these consortia, managing projects totaling USD 15.6 million. These projects span research and technological development in areas such as livestock, rice, wheat, potatoes, citrus, other fruits, forages, risk management, water use, and climate change adaptation.

Ecuador has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 2.5 million. Over 26 years of membership, it has participated in 50 consortia representing approximately USD 42.2 million, of which FONTAGRO and other agencies contributed USD 14.0 million. Ecuador has led 8 consortia, managing projects totaling USD 8.0 million. These projects focus on research and technological development in areas such as climate change, livestock, potato, maize, rice, fruit, and bean crops, among others.

Spain became a member of FONTAGRO in 2008 with an initial contribution of USD\$ 14.72 million. Over 16 years of membership, it has participated in 20 consortia representing a total of USD\$ 14.9 million, of which FONTAGRO and other agencies contributed USD\$ 5.5 million. In 3 of these consortia, Spain acted as the leader, managing projects totaling USD\$ 3.0 million. These projects encompass research and technological development in areas such as climate change adaptation, potato, maize, and fruit crops.

Honduras has been a member of FONTAGRO since 2005 with an initial contribution of USD\$ 2.5 million and has participated in 28 consortia totaling USD\$ 21.4 million, of which FONTAGRO and other agencies contributed USD\$ 8.9 million. Honduras has led 1 consortium worth USD\$ 0.4 million. These projects cover research and development areas such as livestock farming and crops like coffee, maize, beans, and potatoes.

Nicaragua has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 1.0 million. Over 26 years of membership, it has participated in 37 consortia representing approximately USD 29.9 million, of which FONTAGRO and other agencies contributed USD 12 million. Nicaragua has led 3 of these consortia, managing projects totaling USD 2.6 million. These projects focus on research and technological development in areas such as livestock farming, production chains, food safety, and rural extension. Nicaragua has also participated in projects involving crops such as coffee, maize, beans, plantain, banana, rice, cassava, tomato, and oil palm.

Panama has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 5.0 million. Over 26 years of membership, it has participated in 44 consortia representing approximately USD 38.9 million, of which FONTAGRO and other agencies contributed USD 14.2 million. Panama has led 8 of these consortia, managing projects totaling USD 6.8 million. These projects focus on research and technological development in areas such as climate change, rice, potatoes, maize, beans, coffee, plantains, livestock farming, and more.

Paraguay has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 2.0 million. Over 26 years of membership, it has participated in 23 consortia representing approximately USD 20.5 million, of which FONTAGRO and other agencies contributed USD 7.0 million. These projects cover research and technological development in areas such as information systems and monitoring for risk management in agricultural production, climate change strategies, wheat and cassava crops, and organic production.

Peru joined FONTAGRO in 2000 with an initial contribution of USD 2.5 million. Over 24 years of membership, it has participated in 51 consortia with a total value of USD 44.6 million, of which FONTAGRO and other agencies contributed USD 16.9 million. Peru has led 10 of these consortia, managing projects worth USD 6.3 million. These projects focus on research and technological development in areas such as climate change adaptation, potato, sweet potato, maize, bean, Amazonian fruits, solanaceous crops, and more.

The Dominican Republic has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 2.5 million. Over 26 years of membership, it has participated in 37 consortia representing approximately USD 35.5 million, of which FONTAGRO and other agencies contributed USD 11.7 million. The Dominican Republic has led 2 of these consortia, managing projects worth USD 1.1 million. These projects focus on research and technological development in areas such as climate change, livestock farming, and crops like coffee, maize, honey, bananas, beans, avocados, and plantains.

Uruguay has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 2.5 million. Over 26 years of membership, it has led 18 consortia with a total value of USD 14.9 million and participated in 58 consortia worth USD 50.5 million, of which FONTAGRO and other agencies contributed USD 16.0 million. These projects focus on research and technological development in areas such as efficient water use, organic production, risk management, livestock farming, and crops including rice, wheat, potatoes, barley, citrus, apples, and forage, among others.

Venezuela has been a founding member of FONTAGRO since 1998, with an initial contribution of USD 12.0 million. Over 26 years of membership, it has participated in 29 consortia valued at approximately USD 24.8 million, of which FONTAGRO and other agencies contributed USD 8.6 million. Venezuela has led 2 consortia with a total value of USD 2.7 million. These projects focus on research and technological development in areas such as potatoes, rice, plantains, bananas, maize, beans, fruits, and aquaculture.
